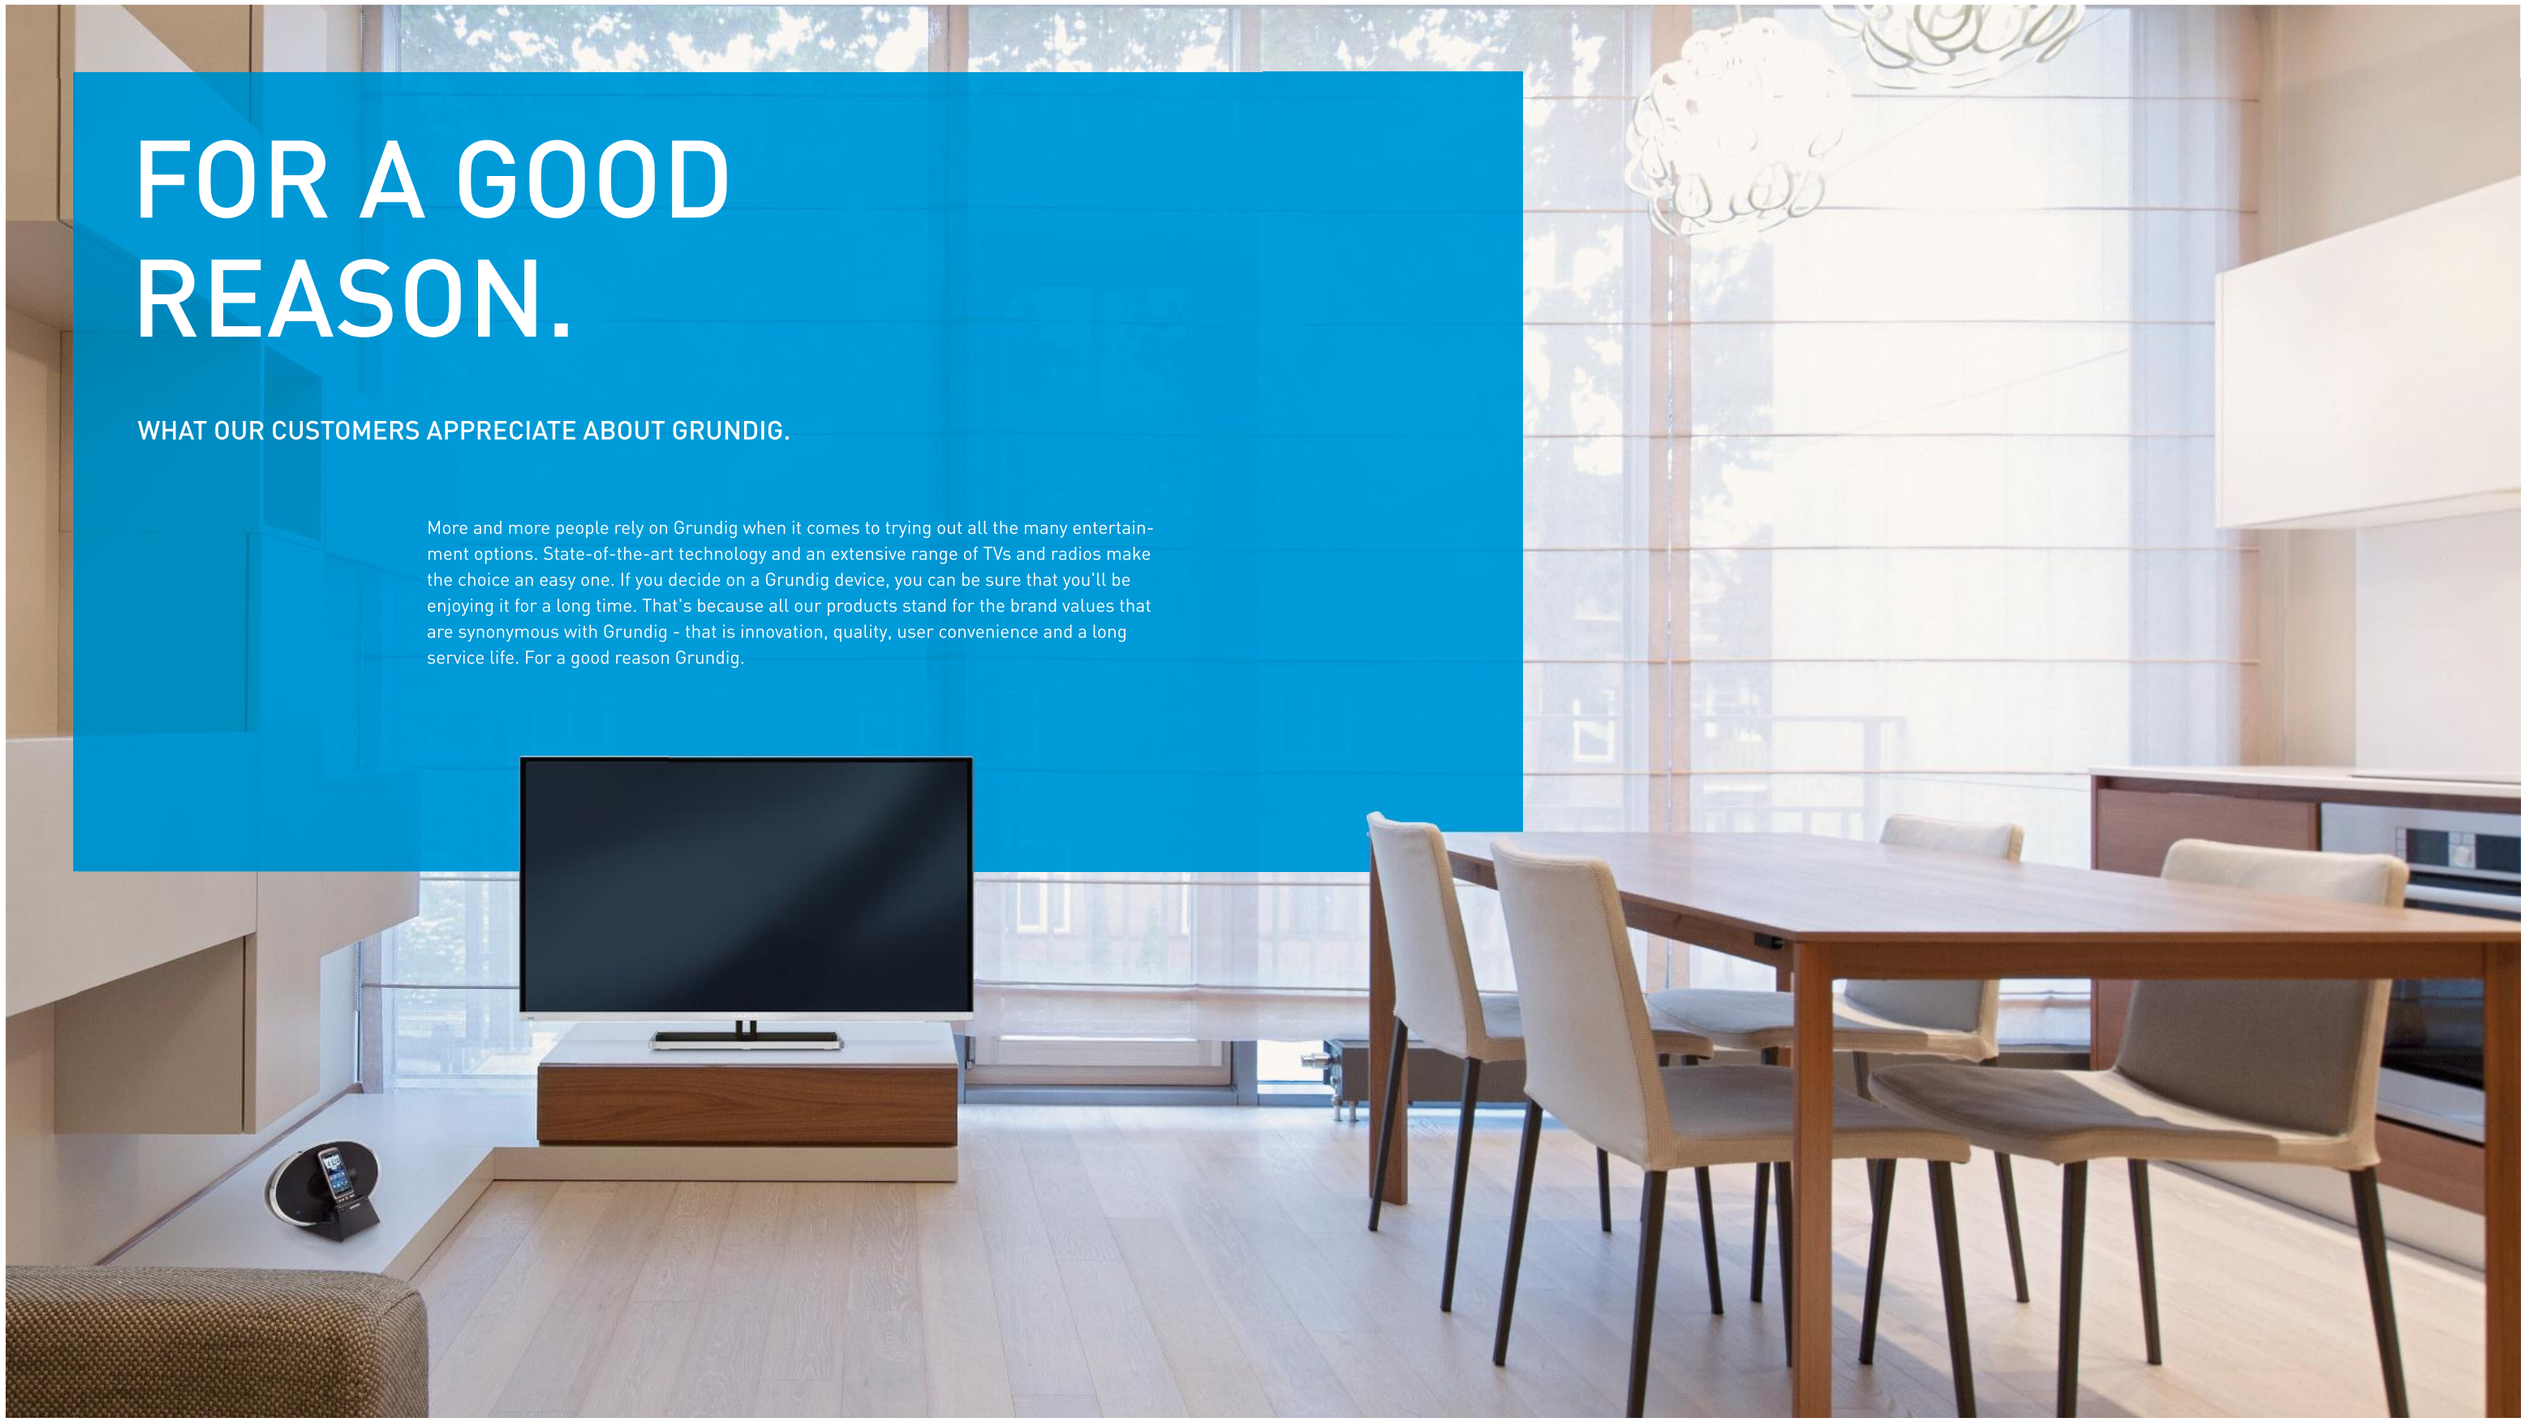
FOR A GOOD REASON.

WHAT OUR CUSTOMERS APPRECIATE ABOUT GRUNDIG.

More and more people rely on Grundig when it comes to trying out all the many entertainment options. State-of-the-art technology and an extensive range of TVs and radios make the choice an easy one. If you decide on a Grundig device, you can be sure that you'll be enjoying it for a long time. That's because all our products stand for the brand values that are synonymous with Grundig - that is innovation, quality, user convenience and a long service life. For a good reason Grundig.



VISION

THE FUTURE IS SMART.

The Grundig LED TVs with Digi 9000 chassis and Motion Picture Improvement 2.0 let you experience television in a new quality. Look forward to even fuller colour, richer contrast, natural motion sequences and razor-sharp pictures in Full HD. You can enjoy films with 3D technology that have never been as gripping. This home cinema experience is supported by excellent sound with SRS StudioSound HD. The versatile USB options are extremely practical as part of twin mode recording, so you'll never miss a goal, a scene or a film again.

Use the whole spectrum of television 2.0 with our latest generation of smarter LED TVs. You have access to any number of online services and can use a variety of useful additional functions. With a Baby Cam available as an accessory, you can check your sleeping child in the next room while you're watching a film. Talk to your friends via TV with top quality pictures when "plugged into Skype™" and using Video Call camera. The TV is increasingly becoming the focal point of your household network.

TECHNOLOGY

LED BACKLIGHTING – FOR EVEN MORE BRILLIANCE.

LED backlighting technology is a modern version of illumination in LCD monitors. Grundig uses "Edge LED" technology, with small LEDs arranged on all four sides of the monitor. They illuminate the entire surface of the panel. The result is a picture display true to nature, in brilliant colours and with outstanding contrast. Using LEDs in LCD TVs also reduces energy consumption and allows the housing of these models to be incredibly slim. Another advantage is the long service life of the LEDs used.

With Edge LED technology, small LEDs are arranged on all four sides of the monitor.

The advantages of LED backlighting technology:

- Superb contrast ratio
- Brilliant colour reproduction
- Outstanding picture sharpness
- Low energy consumption
- Slim housing
- Long panel service life

THE GRUNDIG PICTURE PERFECTION RATE.

200Hz
400Hz

The Grundig Picture Perfection Rate particularly improves the quality of motion pictures. In addition to the usual picture refresh rate of the panel (100 or 200 Hz), the Grundig Full Motion technology combined with backlight scanning (flashing/dimming backlighting) ensures more visible details in scenes with fast movements. Grundig Full Motion technology is based on the latest generation of powerful video processors which are built into the Grundig LCD TVs. With the help of these processors, the movements in the programme currently on are analysed, additional images calculated (interpolated) and then inserted between the original images. This enables Grundig LCD TVs to reproduce high-quality pictures with a clear, realistic display without any flickering or motion blur.

Television stations broadcast 50 fields per second. In addition to the fields, further fields are calculated and inserted using the new Grundig Full Motion technology, which are calculated using the 100 or 200 Hertz technology of LCD panels. This results in outstanding television pictures with completely fluid motion.

INTEGRATED GRUNDIG MULTIMEDIA PLAYER WITH THE DIVX PLUS HD STANDARD.

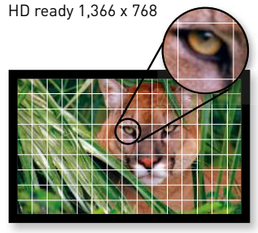
All the Grundig TVs in this catalogue have an integrated multimedia player certified according to the DivX Plus HD standard. DivX Plus HD is the new, state-of-the-art standard for compressing HD videos. Many video-on-demand platforms already use the DivX Plus HD standard.
Paid content protected by the DivX DRM code can be played on Grundig TVs with DivX Plus HD certification.

Multimedia players with DivX Plus HD certification in Grundig TVs have these advantages:

- You can play films in many different formats using the USB port on the TV.
- Just like DVDs, DivX Plus HD films with the .mkv suffix contain chapter markers, subtitles and several audio tracks.
- The "AAC audio" format integrated in DivX Plus HD ensures impressive surround sound. You can savour this sound experience to the full if you connect the digital audio output on the Grundig TV to your home cinema system.

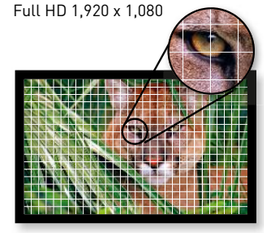
FULL HD 1,920 x 1,080 PIXELS.

The greater the number of pixels, the sharper and more detailed the picture resolution. With 1,920 x 1,080 pixels, Full HD provides the highest picture resolution and the most natural picture reproduction. The pictures are extremely detailed and stunningly realistic due to the great depth effect.



HD ready 1,366 x 768

1,049,088 pixels



Full HD 1,920 x 1,080

2,073,600 pixels
or 6,220,800 colour pixels

MOTION PICTURE IMPROVEMENT BY GRUNDIG.

Grundig TVs with Motion Picture Improvement always give you excellent picture reproduction with visibly sharper and flicker-free TV pictures. The latest high-speed processing chip set calculates additional intermediate pictures and integrates them into the appropriate motion phases. This ensures a natural flow of movement and outstanding picture quality for fast-moving scenes.

Without Motion Picture Improvement

Blurred motion

With Motion Picture Improvement

Sharp pictures, even with fast motion sequences

DYNAMIC CONTRAST PLUS.

The picture contrast is the relationship between the brightest and darkest picture display. Our new dynamic contrast optimisation guarantees the best possible contrast for each individual picture on the screen. And this means an optimal depth of focus.

Low contrast

High contrast with deep black and vibrant colours

FROM DIGI SX TO DIGI TP AND DIGI TK TO DIGI 9000. THE CULMINATION OF RAPID DEVELOPMENT.

Digi 9000 – the latest addition from the era of the successful Grundig chassis. Integrated in the new Grundig 9380 and 9372 TV models, this chassis is striking thanks to Motion Picture Improvement 2.0 with even more colour brilliance, even higher contrast values and razor-sharp pictures in Full HD. Advanced technology, such as SMART inter@ctive TV 2.0 with a whole host of online options and interesting accessories, as well as USB recording 2.0 with further recording functions, extend the quality of the application way beyond the actual television. Of course, everything is operated by the extremely user-friendly Grundig Comfort Guide. All the major settings can be made intuitively thanks to the self-explanatory user guide.

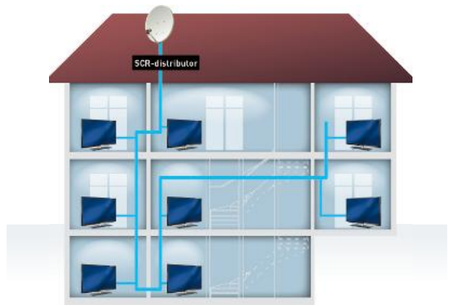
COMFORT GUIDE FOR MORE CONVENIENCE.

Grundig televisions set the standard when it comes to user convenience. That's because Grundig TVs are equipped with the Grundig Comfort Guide. The user interface has been completely redesigned and its operation revolutionised. High tech is now perfectly simple thanks to self-explanatory menu structures, a sensible user guide and quick and easy brightness, colour and contrast setting with the Comfort Guide. Even those not very savvy with technology will soon be having fun using the TV. And what is so special? The split-screen setting allows the user to compare the original picture with the new one while adjusting it. Consulting the operating manual to get the TV setting you want is now a thing of the past.

Picture settings

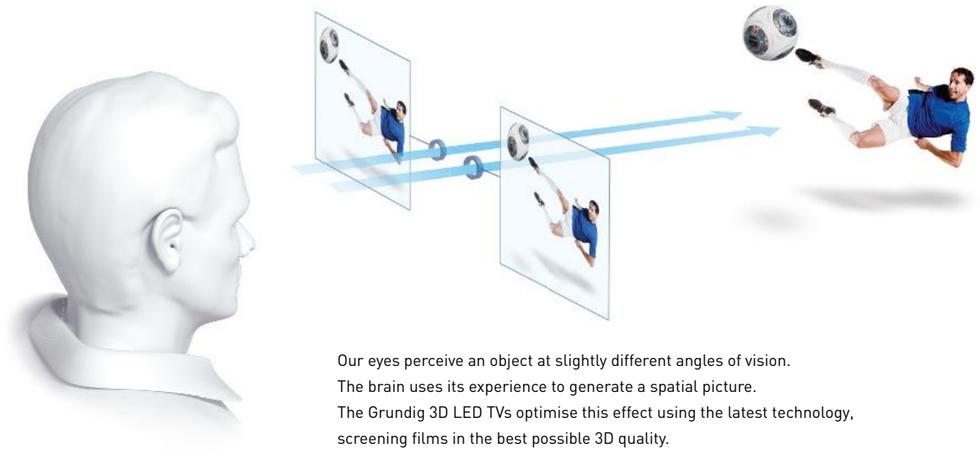
THE GRUNDIG SAT CHANNEL ROUTER (GSCR) SINGLE CABLING SYSTEM, MAKES CONVERTING TO SATELLITE TELEVISION EASY AND CONVENIENT.

Satellite reception usually involves guiding a special cable from the satellite dish or satellite distributor to each and every receiver. Not with the Grundig TVs, which have the Grundig Sat Channel Router (GSCR) single cabling system. Thanks to the inbuilt GSCR, Grundig TVs can use the existing cable infrastructure in the house or flat for the satellite signals. The Grundig GSCR single cable system is especially useful when installing a new, so-called star network would be just too much work. The single cable system is also suitable for those changing from cable to satellite television and have several households or devices to provide for. A so-called SCR distributor is required as an accessory (not supplied by Grundig) which feeds the satellite signals into the network just like a router. Every TV in the house has an address of its own, to which the pre-defined data is sent. Up to eight units can be integrated into a GSCR system.



EXPERIENCE TELEVISION IN A NEW DIMENSION.

Be prepared for everything and plunge into the third dimension. Experience an unrivalled home cinema experience with razor-sharp pictures. The polarised 3D technology in the Grundig 3D LED TVs works using pole filters in the TV and the accompanying 3D glasses, which polarise the light from two fields. This means the viewer's right and left eye see the TV pictures from slightly different perspectives. These two fields are then blended into one spatial picture in the brain. As 3D perception not only functions when the viewer is sitting directly in front of the TV, but also when the viewer moves to one side and watches from a much wider angle of vision, we decided to include six pairs of 3D glasses with every Grundig 9380 and 9372 television. Then you can enjoy the 3D experience on the sofa with your family or friends. And as you would expect, Grundig 3D LED televisions also allow USB recording for 3D programmes received via digital DVB signals.



Our eyes perceive an object at slightly different angles of vision.
The brain uses its experience to generate a spatial picture.
The Grundig 3D LED TVs optimise this effect using the latest technology, screening films in the best possible 3D quality.

GRUNDIG USB RECORDING 2.0 – GET A FILM. LET THE FILM ROLL.

Turn your LCD TV into a USB video recorder: you can record films and play them back, all without an external DVD recorder – this is USB recording. You only need a Grundig LCD TV with USB recording functions, a suitable USB stick or an external hard disk. One-touch recording of a TV programme currently running, pre-programmed recording or the TimeShift function – the many LCD TVs offer all the benefits of USB recording.

- Record the digital TV channel received via satellite, cable or DVB-T directly onto a USB stick or external hard disk
- Even broadcast Full HD content can be recorded and, on our 3D LED TVs, 3D programmes received via digital signal as well
- USB recording of a programme while simultaneously watching a different programme on the same transponder (with satellite channels) or on the same frequency (with cable channels)
- USB recording using the integrated triple tuner in the background, while simultaneously being able to watch content from an external source, such as a Blu-ray player
- One-touch recording using the record button on the remote control
- Pre-programmed recording via EPG or recording timer
- TimeShift function for delayed viewing
- Recorded content can only be played on the same LCD TV

AN HD TRIPLE TUNER FOR UNLIMITED TV ENJOYMENT.

Thanks to an HD triple tuner, you are equipped for any type of reception. Most televisions in this catalogue allow satellite, cable and DVB-T reception with their integrated receivers. You can receive TV signals without an additional set-top box in both standard digital resolution (MPEG 2) and high resolution HD quality (MPEG 4). In addition to reducing the amount of cables, only one remote control is needed and various reception sources can be used (e.g. if you move home and the reception type changes).

GREEN TO GO – THE GRUNDIG ENERGY-EFFICIENT TVs.

How much electricity does a television consume in standby mode or when operating? Consumers can identify the power consumed by televisions by glancing at the EU energy label. The labels with the classes A++ to E indicate the efficiency. Green stands for high efficiency, red for low efficiency. Grundig has been working proactively for years to reduce the energy consumed by its televisions when operating as well as in standby mode. As a result, all Grundig LED TVs fulfil the requirements for a classification in the highest "green" energy efficiency classes. The Grundig 39 VLE 931 BL even complies with efficiency class A++ with its low consumption values.

NOW YOU CAN USE AN APP – REMOTE CONTROL BY MOBILE PHONE.

Anyone with an iPhone, iPad, iPod touch, Android smartphone or tablet can access the features of the Grundig televisions even faster in future. With the free Grundig remote control app, these appliances become fully-fledged TV remote controls. All you have to do is to log the televisions and the mobile devices onto the same network. To make the apps easier to operate, they even take on the design of the Grundig remote control. The option of using the keyboard is especially practical for twittering text messages, searching for videos on YouTube or entering internet addresses. The remote control app works with all the Grundig SMART inter@ctive TVs.

Download the remote control app free of charge at:

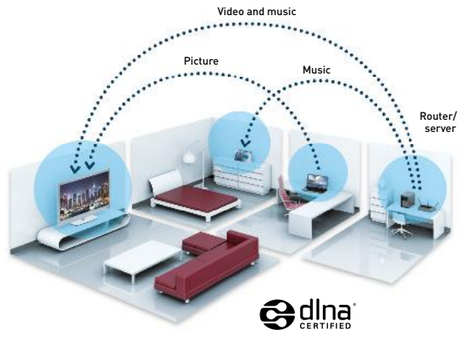
GRUNDIG LED TVs AT THE CENTRE OF YOUR HOME NETWORK.

All new Grundig LED TVs (with a display diagonal of 26" or more) are network-capable and DLNA-certified. This means that they can communicate effortlessly with any other DLNA-certified device in your home network, even those made by other manufacturers. Digital Living Network Alliance (DLNA) is an international association of entertainment electronics, IT hardware and mobile telephone manufacturers. This aims to ensure perfect communication between IT devices in the home and personal use sector.

The system lets you load and play any accessible files on the network on your Grundig LED TV simply by using the remote control – so you don't need to waste time connecting a USB hard disk or burning DVDs. Music, video and image files are transmitted to the LED TV via a wireless network (WLAN) using a wireless stick (USB dongle). HD video files can be loaded at an even faster speed via the built-in cable network connection in the LED TV.



SMART INTER@CTIVE TV: TV ENTERTAINMENT AND INFORMATION STRAIGHT OFF THE INTERNET.

Along with the DLNA certification, SMART inter@ctive TV 2.0 in some Grundig TVs complete the networked world of Grundig. Like many other technologies, the future of television is also online, where you, the viewer, can download your entertainment programme and any other information directly. Thanks to SMART inter@ctive TV in the new Grundig LED TVs, you can access a wide range of online services conveniently and directly without having to connect through a PC. These online services appear on your screen in the form of "widgets" (graphic icons), which allow user-friendly operation and a high-quality graphic display. This gives you direct access to Facebook, YouTube, funspot, Bild.de, World Weather Online – and many others ...

Many of the new Grundig televisions are already installed with the SMART inter@ctive TV 2.0 version. Here you can download all the online services you want directly onto your TV from Grundig's App Store and then just access them by clicking. The internet can also be accessed using an open browser by entering the www address. Another feature of SMART inter@ctive TV 2.0 is the option of using apps (Facebook, TwitTalk and Baby Watch) at the same time as you are watching television using a split-screen display.

HbbTV

HBBTV ENABLES YOU TO FIND OUT EVERYTHING THERE IS TO KNOW ABOUT YOUR FAVOURITE SHOW, AND PRIMES YOU FOR THE INTERACTIVE, MULTIMEDIA FUTURE OF TELEVISION.

All Grundig LED TVs with integrated SMART inter@ctive TV are also HbbTV-capable. HbbTV (Hybrid broadcast broadband TV) is a type of interactive, multimedia and advanced teletext, which unites internet information and channel information on programmes being broadcast. In future, once the full potential of HbbTV is exploited, television will become more interactive, more colourful and even more entertaining for everyone. All public broadcasting companies and major private broadcasters already provide HbbTV content, for instance as background information on shows being broadcast. You can easily access this information by pressing the red button on the remote control of your Grundig TV. The media centres maintained by public broadcasters can be accessed directly, allowing you to click on the programme of your choice and watch it straight away.

MULTIMEDIA ACCESSORIES FOR LED TVs WITH SMART INTER@CTIVE TV 2.0

VIDEO CALL CAMERA.

Using the "plugged into Skype™" app already installed on the television and the Video Call camera accessory, you can make a call with excellent picture quality using the television.

EASY MOUSE REMOTE CONTROL.

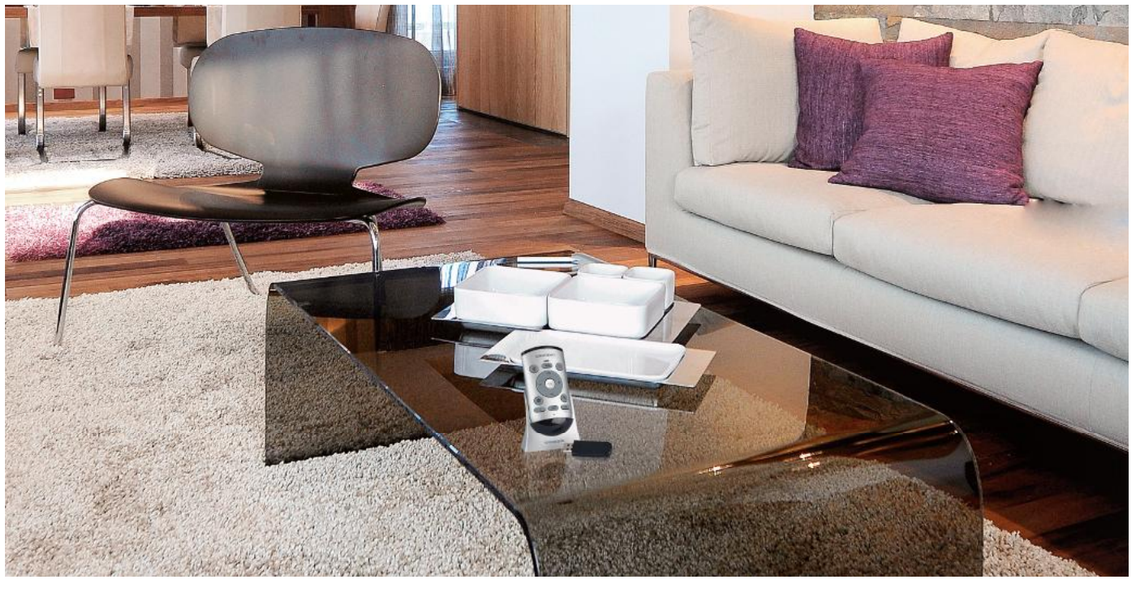
Your TV listens to your every word with the Easy Mouse remote control available as an accessory. The built-in microphone makes it easy to control the LED TV with voice commands. You can navigate in the open browser just as fast as on a PC with the air mouse function (motion control).

BABY WATCH CAMERA.

The "Baby Watch" app is available in the Grundig App Store. Along with the Baby Watch camera with motion sensor available as an accessory, a picture of your sleeping baby in the nursery appears on the television as soon as the child stirs.

DUAL GAMING GLASSES.

Dual gaming makes the most of the 3D feature of Grundig LED TVs with the Digi 9000 chassis, to show two players each with their own view of a game on the entire TV screen. Unlike 3D glasses, these dual gaming glasses available as accessories, are either right or left polarising on both sides. This means that only one half of the 3D picture is shown to the viewer and each player gets their own 2D full-screen display of the game over the complete width of the TV screen.



THE NEW ELEGANCE OF INTERACTIVE TELEVISION.

GRUNDIG VISION 9 LED TVs.

Even at first glance, the 9380 models make it clear that the new generation of LED TVs from Grundig provide viewing pleasure at its very best. Visually distinctive, they come in a stylish design with the elegant, ultra-thin brushed aluminium frame and high-quality, pedestal.
Once the television is then switched on, the experience of premium quality comes into play for the viewer.
Here you can enjoy the benefits of maximum interactivity and user-friendliness combined with excellent sound and picture quality. The 9380 models make the Digi 9000 TV platform into a real all-round multi-talent.
The SMART inter@ctive TVs 2.0 provides you with an open web browser and its very own app store for interactive pleasure.

FROM GOOD TO PERFECT ENTERTAINMENT.

MULTIMEDIA ACCESSORIES FOR SMART INTER@CTIVE TVs 2.0

The latest generation of LED TVs are equipped with the Grundig TV chassis "Digi 9000" and "Digi 900" which ensure impressive picture quality, outstanding sound performance and a convenient user guide, typical for Grundig, for numerous functions. SMART inter@ctive TV 2.0 combined with the accessories here gives you useful applications which go far beyond conventional television.

THE GRUNDIG BABY CAM. FOR THE COMFORTING FEELING THAT EVERYTHING IS OKAY.

During the initial installation of the Grundig LED TVs with the Digi 9000 and Digi 900 chassis, navigate to the Grundig App Store under online settings. Here there are numerous online services which you can install on your TV – such as the "Baby Watch" app. Along with the Baby Watch camera with motion sensor available as an accessory, an inset picture appears of your baby lying in bed in the nursery as soon as the child moves or cries. So you can always keep an eye on everything and carry on watching television. The WLAN frequencies are used in the home network for reliable transmission. The camera also works in the dark due to an inbuilt infra-red light.

SIMPLE, WITH EXCELLENT PICTURE QUALITY. TELEPHONING WITH THE TV.

Using the "plugged into Skype™" already installed and Video Call camera available as an accessory, you can make a call from the comfort of your living room in excellent picture quality using the television with up to 1,280 x 800 pixels. The Video Call camera is simply attached to the top of the frame on the Grundig LED TV with a flexible holder. Two special inbuilt microphones ensure excellent speech clarity.

YOUR TV LISTENS TO YOUR EVERY WORD WITH THE EASY MOUSE REMOTE CONTROL AVAILABLE AS AN ACCESSORY.

The new Grundig LED TVs with the Digi 9000 and Digi 900 chassis listen to your every word with the Easy Mouse remote control available as an accessory. The remote control makes it easy to control the LED TV with voice commands. You can navigate in the open browser just as fast as on a PC with the air mouse function (motion control). The Easy Mouse remote control also has a headphone connection so that, for instance, those with impaired hearing can be connected directly for better perception of the TV sound, and move around the room freely at the same time. Charging unit and high-speed wireless adapter are supplied.

DUAL GAMING: TWO PLAYERS, TWO PICTURES.

This feature benefits from the 3D-capability of the new Grundig LED TVs with the Digi 9000 and Digi 900 chassis. The polarising 3D technology works using pole filters in the TV and the accompanying 3D glasses, which polarise the light from two fields. This means the viewer's right and left eye see the TV pictures from slightly different perspectives. These two fields are then blended into one spatial picture in the brain. In contrast, the dual gaming glasses available as accessories are either right polarised or left polarised in both glasses. This means that only one half of the 3D picture is shown for the viewer. "Dual Gaming" allows 2 players to each see only their own complete picture in a 2D game (e. g. Need for Speed). Each player gets either left or right polarised glasses on their own 2D full screen display of the game over the complete width of the TV screen.

WATCH THE NEWS LIKE THIS.

GRUNDIG LED TVs FOR ALL TASTES.

Even if it's not good news – the Grundig Direct LED TVs with their excellent value for money now offer LED viewing pleasure for everyone. The new slimmer design is as beautiful to look at as the superior picture quality and improved colour reproduction. The low power consumption with energy efficiency class A makes it a progressive companion. The small Grundig LED TVs in Vision 8 design with 26" and 22" impressed the jury of the Plus X Awards. These TVs won prizes in three categories: High Quality, Design and Ease of Use.

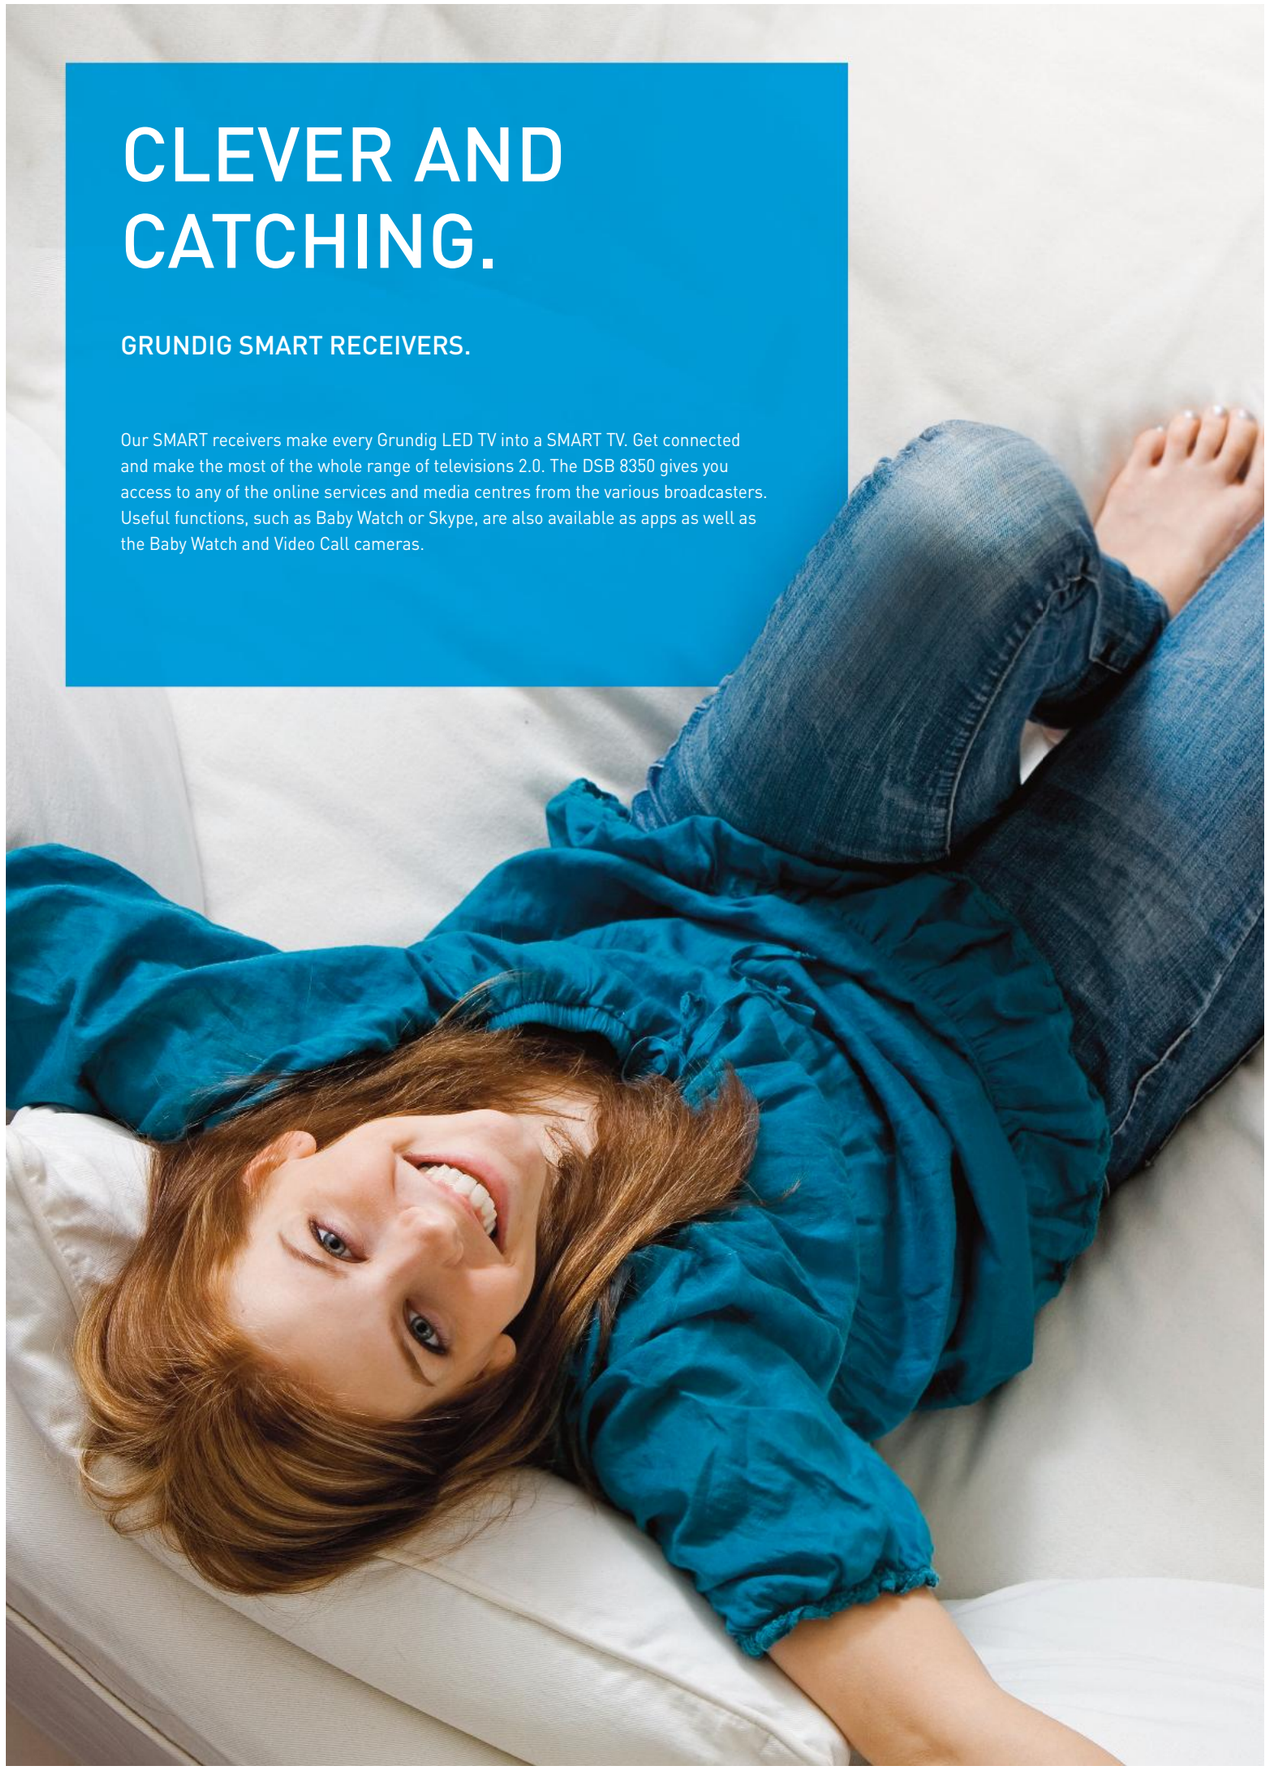
CLEVER AND CATCHING.

GRUNDIG SMART RECEIVERS.

Our SMART receivers make every Grundig LED TV into a SMART TV. Get connected and make the most of the whole range of televisions 2.0. The DSB 8350 gives you access to any of the online services and media centres from the various broadcasters. Useful functions, such as Baby Watch or Skype, are also available as apps as well as the Baby Watch and Video Call cameras.



When Grundig televisions and Grundig receivers are connected via HDMI-DigiLink (CEC), the TVs (TP 7, TP 8, TP 9) system remote control operates all the functions of the receiver. Of course, if you have the Grundig remote control app, this also works with an iPhone, iPad, iPod touch or Android smartphone, provided the Grundig SMART inter@ctive TV and Grundig receiver are connected via HDMI-DigiLink (CEC).

SOUND

EXHILARATING SOUND WITHOUT NOISE.

The radio has been redefined with the advent of DAB+. You can enjoy superior sound quality to the full with our wide range of digital radios. Internet radio offers you an unlimited choice of broadcasters. Thousands of broadcasters, a huge selection of music and countless information programmes await you. Grundig offers you a large selection of internet radios for this fascinating sound experience.

New in the range: Bluetooth-enabled audio products play your favourite music wirelessly transmitted from your mobile phone or tablet with full sound.

Those with more conventional tastes can choose from our plentiful portable or table-top radios. Experience a perfect start to the day with our Sonoclocks to wake you up and kick-start your good mood.

SPOILT FOR CHOICE.

DAB+ MEETS BLUETOOTH.

The triumph of DAB+ continues – and Grundig is paving the way with its wide range of digital radios. The large spectrum of radio stations and excellent sound quality make digital radio very popular. It's never been so easy to choose your own favourite station from such a wide variety. And our new Bluetooth-enabled audio products play the music stored on your mobile phone or tablet in impressive sound quality.

RADIOS OF THE FUTURE.

THE DIGITAL RADIO EXPERIENCE.

The medium of radio has gained a new dynamic.
Useful additional functions such as transmitting text, make radio programmes into an experience. You can then refer to information about the current programme as well as news or traffic reports. Listening to the radio becomes real infotainment.

LISTENING TO CRYSTAL CLEAR RADIO IN COMFORT.

GRUNDIG DIGITAL RADIOS.

You'll appreciate the benefits of digital radio straight away, especially the reception because there's no noise and no more crackling. No need to bother searching for a frequency any more because the stations are detected automatically. Even now, you can receive dozens of radio stations on digital radio, and the range is growing all the time. Our Grundig digital radios prime you for the radio of the future, and of course you can carry on listening to FM stations that are not yet broadcasting in the new standard DAB+.

MAXIMUM LISTENING PLEASURE WITHOUT ANY CABLES.

GRUNDIG BLUETOOTH SPEAKER.

Nowadays your favourite music can go wherever you go, thanks to smartphones and tablet PCs. But it's not always a pleasure to listen to. This is due to the low power output of the integrated speakers. To enjoy your favourite music at full volume to the fullest, there are external speaker systems. The Bluetooth loudspeakers from Grundig now give you full sound and crystal clear tone in a compact format – with no more cable mess. Music finds its way to the loudspeaker via Bluetooth. You can play your latest favourites anywhere, without a fixed power supply on models with rechargeable batteries. The very intuitive control options make the Grundig Bluetooth speaker extremely user-friendly. The solid workmanship and materials are also impressive.

GSB 800

- Sound bar with 4 loudspeakers for LED TVs
- Music streaming from mobile phone or tablet via Bluetooth

CLEVERLY DESIGNED FOR MORE CONVENIENCE.

STEAM EXPRESS IRONS.

Innovative technology is always oriented towards user requirements – and surprises with more convenience. The Grundig Steam Express irons are an impressive example of this. You can easily adjust the ideal steam power for each item of laundry. The irons glide over even difficult parts smoothly and securely – for example sleeves or button borders – giving you excellent results. The 3 metre cable allows you plenty of freedom when ironing with no need for an extension cable. The simple descaling mechanism reliably ensures that you can enjoy your high-quality Grundig Steam Express iron for years to come.

DESIGN IN SERIES.

WHITE SENSE DESIGN SERIES.

The Grundig White Sense series (from left to right): KM 7280w coffee machine, WK 7280w kettle, BL 7280w hand blender, HM 6280w hand mixer, CH 7280w chopper and TA 7280w toaster

High-quality, convenient technology – exceptionally lightweight and attractively packed. White Sense from Grundig charms your everyday kitchen chores. The clear shapes and white surfaces give a streamlined look and allow the grey hidden details enough space to unfold. All the appliances – from the coffee machine, to the hand mixer, to the toaster – have a consistently standard look. With a 5 year purchase warranty, you have plenty of time to gradually complete your White Sense line.
